**Attachments:** Water Level & Precip Data - 9-2012.xls

John-sorry it took so long, i was out last week. i've put together a couple of plots of the water-level data from the data Techalloy sent for sept/oct. one for the whole month and one for the week of the 5th-12th. with title and labels, this is what i'd be expecting form Techalloy.

it took me less than 30 minutes to generate these graphs, using the software (excel 2010) i have, so i'm not sure why Jack is having difficulties.

if jack wants to update the figures along the lines we suggested in earlier reviews he should be able to take these files and cut and past the data, then click on the actual data plots in the graph and adjust the cell numbers in the screen at the top of the chart to the data points he wishes to plot. then it should just be a matter of hitting the "date" axis to bring up a "format axis" option, then adjust the min/max numbers to get the plot to look good.

i'll get to the rest of the stuff next week.
